REGULATORY STANDARD

DRAP Wholesale Drug Licensing

1 Wholesale ERP vs. Retail Pharmacy POS

PharmaDist is an enterprise wholesale distribution ERP explicitly engineered for authorized pharmaceutical stockists, distributors, and bulk medicine suppliers. It enforces business mechanics distinct from retail pharmacy counters:

OPERATIONAL DIMENSION	RETAIL POINT-OF-SALE (POS)	PHARMADIST WHOLESALE ERP
Customer Profile	Walk-in individual patients (loose strips, single bottles).	Licensed Medical Stores, Pharmacies, Hospital Formularies.
Batch Tracking	Optional or generic SKU-level tracking.	Mandatory Batch Tracking tied to every carton.
Inventory Queue	FIFO (First-In, First-Out) or unmanaged shelf picking.	Strict FEFO (First-Expire, First-Out) auto-prioritization.
Credit Governance	Immediate cash payment / instant card tap.	Credit Limit Barrier Engine with approval workflows.
Documentation	Thermal roll paper receipts (80mm / 58mm).	DRAP Form 2–A Tax Invoices & Delivery Challans (A4).

2 Network Topology: Multi-PC LAN Deployment

PharmaDist operates 100% offline. No internet connection is ever required. Multiple workstations, billing desks, and field tablets communicate seamlessly over the local office Wi-Fi router.

HOST SERVER PC Contains the master database (wmdms.db). Run application here first. <code>http://localhost:3000</code>	BILLING WORKSTATION Order entry desk connects via Server's Local IPv4 address. <code>http://172.20.100.127:3000</code>	MOBILE ORDER BOOKERS Salesmen connected to office Wi-Fi submit bookings instantly. <code>http://172.20.100.127:3000</code>
---	---	---

💡 **Pro-Tip for Office Networks:** Assign a Static IP address to the Host Server PC in your Wi-Fi router settings (e.g., 192.168.1.50). All team members can bookmark this single link on their desktop browsers and mobile devices.

Pre-Configured System Access Credentials

USER ROLE	LOGIN EMAIL	DEFAULT PASSWORD	ASSIGNED PERMISSIONS
Super Administrator	admin@pharmadist.com	admin123	Unrestricted access, settings, backups, user accounts & audit

USER ROLE	LOGIN EMAIL	DEFAULT PASSWORD	ASSIGNED PERMISSIONS
			logs.
Sales Manager	sales.manager@pharmadist.com	sales123	Customer orders, rate revisions, credit limit override authorizations.
Warehouse Officer	warehouse@pharmadist.com	warehouse123	Factory stock intake (GRN), batch verification, inter-branch transfers.
Accounts Officer	accounts@pharmadist.com	accounts123	Collections, payment vouchers, supplier settlements & P&L audits.

3 Step-by-Step Business Setup & Daily Operations

1 Enterprise Profile & DRAP License Configuration

[Settings → General](#)

Navigate to `/settings`. Enter your official Registered Wholesale Firm Name, DRAP Wholesale Drug License No. (e.g., `DRAP/WDL/LHR-4921`), NTN, STRN, primary warehouse address, and bank account credentials. These values automatically populate all printed Tax Invoices and Delivery Challans.

2 Warehouse Godown & Rack Architecture

[Inventory → Warehouses](#)

Configure physical storage facilities. Establish your Main Central Godown and designate rack coordinates (e.g., `Rack A-01 (Antibiotics)`, `Cold Chain Unit #2 (Insulins)`). Every subsequent purchase automatically pins batches to exact rack locations for rapid order picking.

3 Manufacturers & Supplier Principal Registry

[Purchases → Suppliers](#)

Register licensed pharmaceutical manufacturing principals (e.g., GlaxoSmithKline, Abbott Laboratories, Getz Pharma, Searle, Highnoon). Record company sales contacts, supplier NTN, payment credit terms (e.g., 30 Days Net), and opening balances.

4 Medicine Master Formulary Registration

[Medicines → Catalog](#)

Create master medicine profiles with Generic salt names, dosage forms (Tablet, Capsule, Syrup, Injectable), Trade Price (TP), Maximum Retail Price (MRP), wholesale discount percentages, and minimum reorder alert levels.

5 Factory Consignment Intake & Goods Receipt Note (GRN)

[Purchases → New Consignment](#)

When receiving medicine shipments from pharma factories, select the Supplier, enter the Delivery Challan Number, and input individual batch numbers, manufacturing dates, expiry dates, purchase unit rates, and rack assignments. Upon submission, inventory quantities and Accounts Payable liabilities update immediately.

 **FEFO Invariant Guardrail:** Never enter ambiguous or dummy expiry dates during purchase intake. The ERP's automated batch picker relies exclusively on exact calendar dates to enforce DRAP First-Expire First-Out dispatch.

6

Customer Pharmacies & Credit Limit Governance[Customers → Directory](#)

Register client pharmacies, clinics, and hospital procurement departments. Enter Pharmacy Drug License numbers, owner contacts, geographic sales routes, and strict Credit Limits (e.g., Rs. 300,000 with a 15-day maximum credit duration).

7

Sales Representatives & Field Order Bookers[Sales Reps → Teams](#)

Setup territory sales officers and order booking agents. Assign designated geographic routes and monthly sales recovery targets for commission and performance evaluations.

8

Wholesale Order Booking with Strict FEFO Dispatch[Sales → New Wholesale Order](#)

Select target Pharmacy. The real-time Credit Gauge displays existing outstanding balance against credit ceiling. When adding medicines, the system automatically pulls the earliest expiring valid batch. If customer's balance exceeds their credit limit, an approval barrier is enforced.

9

DRAP Form 2 – A Tax Invoices & Delivery Challan Dispatch[Invoices → Print Engine](#)

Click **Print Invoice** to generate standard single-page A4 wholesale documents with complete batch tracking, Trade Price, MRP, warranty clauses, and authorized signatures. Click **Print Challan** to generate warehouse dispatch notes without commercial valuations for delivery drivers.

10

Market Recovery Collections & FIFO Settlement[Payments → New Collection](#)

When field agents return with market collections, record amounts against Cash, Cheque, Bank Transfer, or Raast. The FIFO allocation engine automatically clears the oldest pending invoices first and generates an official printable **Money Receipt (RCT)**.

🔥 **Historical Financial Integrity:** Invoices permanently capture the Cost of Goods Sold (COGS) at the exact moment of sale. Even if factory purchase prices fluctuate in future months, historical profit calculations remain 100% auditable.

11

Operational Business Overhead Tracking

Expenses → Ledger

Record day-to-day warehouse rent, utility bills, tea/stationary, fuel allowances, and doctor marketing promotions. Expenses are immediately deducted to reflect true operational Net Profit.

12

Executive Profit Cockpit & P&L Analysis

Profit & Loss → Executive Cockpit

Monitor key financial metrics in real-time across four primary indicators:

SALES REVENUE

Rs. 2.45M

Total Invoiced

COST OF GOODS

Rs. 1.96M

Batch Cost Basis

GROSS MARGIN

Rs. 490K

20.0% Margin

NET PROFIT

Rs. 385K

Post-Overheads

13

Comprehensive Reports Suite & Excel/CSV Export

Reports → Reporting Center

Generate 9 pre-built management reports: Customer Balances (AR), Supplier Liabilities (AP), Inventory Valuation, Batch Expiry Watchdog (30/60/90 Days), Low Stock Reorder, and Sales Rep Targets. Export any report to Microsoft Excel (.xls) or CSV with a single click.

14

Database Snapshot & Disaster Recovery Runbook

Settings → Backup & Maintenance

Download live single-file SQLite database backups (.db) directly to your USB drive or cloud backup storage. In case of hardware replacement, copying your backup file back into prisma/wmdms.db restores 100% of transactions, accounts, and batch history instantly.

15

Team Governance & Tamper-Proof Audit Trails

Audit Logs → Forensic Logs

Role-Based Access Control (RBAC) isolates permissions across Super Admins, Sales Managers, Accounts Officers, and Cashiers. All critical events (price adjustments, cancellations, credit overrides) are immutably logged with exact user IDs, timestamps, and previous/new values.

4 Scene-by-Scene Client Video Demonstration Script

Use this standardized 8-scene walkthrough script when recording product demonstrations for prospective pharmaceutical distributors and clients:

Scene 1: Introduction & Architecture

0:00 – 0:45 (45s)

Screen Focus: Main Dashboard Cockpit (/dashboard)

"Welcome! Today we are demonstrating PharmaDist Wholesale ERP — an enterprise distribution platform built specifically for pharmaceutical stockists, authorized distributors, and medicine wholesalers. Operating completely offline with zero internet dependency, PharmaDist seamlessly connects all office workstations and mobile order bookers over local office Wi-Fi."

Scene 2: Executive Dashboard Overview

0:45 – 1:15 (30s)

Screen Focus: Real-time KPI Cards, Sales Graphs, and Live Expiry Feeds

"On the executive dashboard, the business owner gains instantaneous visibility into today's sales revenue, field cash collections, total pharmacy receivables, and supplier liabilities. Notice the live 30-day batch expiry alerts that guarantee you never hold unsold expiring medicine in your warehouse."

Scene 3: Purchase Consignment & Batch Intake

1:15 – 2:15 (60s)

Screen Focus: New Purchase Intake (/purchases/new)

"Let's receive a shipment from a pharmaceutical manufacturer. We select Getz Pharma, choose Augmentin 625mg, enter the factory batch number, expiry date, purchase cost, and warehouse rack location. Upon clicking Submit, inventory stock and supplier accounts payable update synchronously."

Scene 4: Wholesale Order & Strict FEFO Allocation

2:15 – 3:45 (90s)

Screen Focus: New Sales Order (/sales/new)

"Now, let's book an order for a client pharmacy. Notice how selecting Al-Shifa Medicos instantly displays their credit utilization gauge. As we add items, PharmaDist's FEFO engine automatically selects the earliest expiring batch to prevent expired inventory loss. The system protects your working capital by holding orders that breach credit ceilings."

 Scene 5: DRAP Tax Invoices & Delivery Challans

3:45 – 4:30 (45s)

Screen Focus: Invoice Print Engine Modal (/invoices)

"With one click, PharmaDist generates a single-page DRAP-compliant Wholesale Tax Invoice with complete batch numbers, expiry dates, Trade Prices, and legal warranty endorsements. Simultaneously, a non-priced Delivery Challan is generated for dispatch staff and delivery drivers."

 Scene 6: Market Collections & Money Receipts

4:30 – 5:15 (45s)

Screen Focus: Payment Collections (/payments)

"When field recovery agents return, we record payments via cash or cheque. PharmaDist applies FIFO settlement against the oldest outstanding bills and prints an official Money Receipt voucher for the customer."

 Scene 7: Profit & Margin Intelligence

5:15 – 6:00 (45s)

Screen Focus: Executive Profit Cockpit (/profit)

"Here on the Profit Cockpit, distributors can analyze exact Gross Margins and Net Operational Profit after deducting warehouse expenses, staff salaries, and logistics overheads."

 Scene 8: Offline Data Security & Conclusion

6:00 – 6:30 (30s)

Screen Focus: Settings → Backup & Maintenance Tab

"Finally, data security. In the Backup tab, administrators can download a full SQLite database snapshot with one click to guarantee complete data sovereignty. Thank you for exploring PharmaDist Wholesale ERP!"

5 Operational Troubleshooting FAQ**Q: Order displays "Stock Depleted"?**

Remedy: The selected batch has reached zero quantity. Create a new purchase consignment via **Purchases** → **New** or verify stock transfers.

Q: "Credit Limit Exceeded" Warning?

Remedy: The customer has unpaid dues exceeding their allowed ceiling. Collect market payments or require Sales Manager credit override approval.

Q: Can expired batches be billed?

Remedy: Strictly prohibited. The system automatically quarantines expired batches from the active sales queue to ensure full DRAP compliance.

Q: How to recover from a computer crash?

Remedy: Copy your latest downloaded **pharmadist-backup.db** file into the **prisma/** folder as **wmdms.db**. Restart the app to resume work.
